

Day 2 Task — Restaurant Ordering System

Continue your Restaurant Ordering System from Day 1.

Requirements

- 1. Create a menu array containing at least 5 food objects. Each food object should have:**
 - name**
 - price**
 - category**
 - available**
- 1. Create a showMenu() function and use a for loop to display all food items.**
- 2. Ask the customer to enter a food name using prompt().**
- 3. Use a while loop to keep asking until the customer selects an available food.**
- 4. Use for...in to display the properties of the selected food object.**
- 5. Use continue to skip unavailable food items.**
- 6. Use break when the selected food is found.**
- 7. Create one or more simple functions to organize your code.**
- 8. Display the final order using document.write().**

Bonus

Ask for the quantity and calculate the total price.
